Subject: RE: Fight coal exports to Asia from Columbia River in Oregon

Tim,
We have been following it but right now it is not our role to comment. I think Region 10 will eventually be commenting on the EIS for any coal terminal that gets to that stage. I'm glad you are encouraging tribal members to voice their opinions. I think Twa-le at the Spokane has been very active on this.

Subject: Fwd: Fight coal exports to Asia from Columbia River in Oregon

Hi Nancy,

We have been having Tribal members expressing concerns about the air pollution that would result from this project. Do you know if EPA has been following this?

Subject: Fight coal exports in Oregon

The Oregon DEQ appears poised to allow Australian company Ambre Energy to move forward with a major source of pollution in Oregon by building the Morrow Pacific coal export terminal, which would turn the Columbia River into a hub for shipping dirty American coal to Asia.

Late last week, the Oregon DEQ released draft air and water quality permits for the proposed terminal that would allow Ambre to move forward -- polluting the Columbia River and releasing dangerous pollutants into Oregon's air.

Tell the Oregon Department of Environmental Quality: Stop the Morrow Pacific coal export terminal. Learn more and submit a public comment:
